BORELINE SYSTEM FITTED AND READY TO GO – a COMPLETE PUMP SET in a BOX

Take advantage of the Boreline fitting service for 3" and 4" pumps !

Proquip can assemble your pump, motor, cable, Boreline riser and, if required, wellhead as a complete unit – packed in a convenient crate ready for despatch to you for installation on site.

All too often contractors have to install their systems in wet, muddy conditions where it is difficult to keep the pump and rising main clean. These conditions are not ideal for making up cable joints let alone avoiding contamination of the borehole ! Exposure of the rising main system and your operatives to the elements is best kept to a minimum.

Proquip's trained personnel will make up your Boreline system in a controlled environment, ensuring that the complete product is assembled as it should be to ensure a trouble free installation and satisfied customer.

The benefits of this UNIQUE service are clear.

- No Contamination - Pump and Boreline are made up in a clean environment
- Assured Integrity - Factory fitting of the power cable and the cable joint
- Quick Installation - Time saved on site
- Pre connected - Nothing left to chance - coupling torque settings, cable joints, power cable fitting etc .
- Convenient - Packed in a compact crate ready to go
- PEACE OF MIND AND A SATISFIED CUSTOMER
